

**Proposed solution:**

<b>S.NO</b>	<b>PARAMETER</b>	<b>DESCRIPTION</b>
<b>1.</b>	Problem statement (problem to be solved)	To find the solution for who are affected by the natural disasters by prediction.
<b>2.</b>	Idea/ solution description	1.By predicting the future data by analysis the previous data available. 2.Using sensors.
<b>3.</b>	Novelty/ Uniqueness	Predicting the future data by analysis the previous data available.
<b>4.</b>	Social impact/ Customer satisfaction	Ability to anticipate future events, could make a huge difference and help limit the human and material costs of such disasters.
<b>5.</b>	Business Model (Revenue Model)	Requirements like sensor, mobile app, image viewing.
<b>6.</b>	Scalability of the solution	Recurrent neural network.
